

# External Vulnerability Scan — Summary

Monthly authenticated external scan of the production perimeter with SLA-tracked remediation.

**SAMPLE — anonymised demo data. Real exports carry your organisation branding, control mappings and signed timestamps.**

Evidence ID	EV-2026-VULN-06
Owner	J. Patel, Head of Security
Generated	2026-06-30 09:14 UTC
Framework(s)	ISO 27001, SOC 2, PCI DSS, Cyber Essentials Plus
Control(s)	A.8.8 · CC7.1 · Req 11.3
Next review	2026-07-30

## Scan configuration

Provider: (redacted ASV). Targets: app.acme.com, api.acme.com, edge nodes (12). Auth: service account with read-only. Frequency: monthly + on-change.

## Findings

Severity	Count	Within SLA	Open
Critical	0	—	0
High	1	1	0
Medium	4	4	1 (in remediation)
Low	11	11	6 (accepted)

## Remediation

One High finding (outdated TLS ciphersuite on legacy edge node) remediated within 3 days — well inside the 14-day policy SLA. Accepted lows carry documented risk acceptance signed by CTO.
